

## Space Travel

### Student Worksheet ...

- Why would it be difficult to travel to another star?
- Would robot spaceships make it easier? How?
- Do you think scientists will invent spaceships in the future that will take people to other stars and galaxies, like they do in Hollywood movies?

### Something else to think about...

Large distances present enormous obstacles to manned space travel. Some scientists doubt people will ever travel on space ships to distant stars and galaxies. But technology changes quickly. A hundred years ago, few people thought we would ever send people to the Moon!
